DOCK - RITE MATERIALS HANDLING EQUIPMENT

Manufactured by

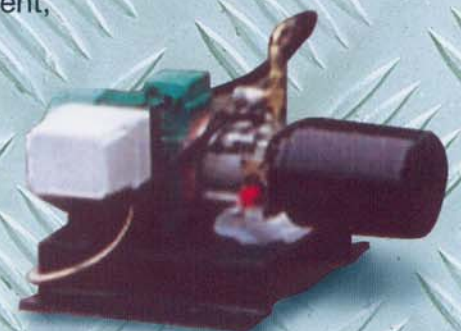

DOCKLEVELLER SUPPLIES CC

FLEXIBILITY Lift tables are individually manufactured using proven principles to cater for the customers' requirements. Variations in Deck size or lift height are easily accomplished.

ACCESSORIES such as railing with gates, mountings for specialised equipment, turntables, extending or swing lips, or even variations in Deck design are handled in house.

STABILITY For maximum stability, scissor legs are normally constructed of solid plate steel. The centre Pivot Point area is additionally reinforced to increase the wearing area of the main pivot in compliance with international safety standards.

DECK The smooth Deck (Checker Safety Plate optional) is heavily reinforced including the peripheral members which are jig welded as a one piece platform to meet or exceed rated capacities within each group of tables.

POWER PACK is sized to meet the needs of the particular Table in terms of capacity and lift speed.

It can normally be positioned either within the structure of the Lift Table or it can be mounted externally for greater ease of access.

The Hydraulic Power Pack, whether in self contained or remote mode, incorporates the latest industrial standards and an internal filter to protect all hydraulic components.

LOW MAINTENANCE The welded frame also acts as a leg/roller wear plate for added service life. All pivot points are fitted with pre-lubricated bushings or sealed ball bearings.

HYDRAULIC CYLINDERS The purpose designed and manufactured Hydraulic Cylinders feature a Hard Chrome Ram with Polyurethane Seals which are locally sourced, where possible, in standard sizes, for ease of replacement.

SAFETY TRIP BAR mounted under the table, stops it upon contact with an obstruction. Electrical switches mounted under the Deck, when actuated by the Safety Trip bar, cut the power circuit and thereby stop the lift table from further down travel.

CONTINUOUS IMPROVEMENT ensures that these specifications will continue to alter as the product is further updated and developed.
