

## ROLLER SHUTTER DOORS

The **INDUSTRIAL ROLLER SHUTTER DOORS** that we manufacture are all **CUSTOM DESIGNED AND FABRICATED**. The heavy duty industrial roller shutter **PROVIDES HIGH SECURITY** with **MAXIMUM STRENGTH**. They are available in a wide **RANGE OF COLOURS** with our specialised powder coating technique.

### **CUSTOMISED**

All doors are **CUSTOMISED TO SUIT** your specific opening and requirements. A **VARIETY OF PROFILES** and steel thickness of 0.6, 0.8 or 1mm are used. The door can be powder coated to match your development's aesthetics. We install the doors and will train the operators where necessary.

### **OPERATING MECHANISM**

**DIFFERENT** operating **MECHANISMS** are available such as **PUSH/PULL, CHAIN, GEARBOX** or **ELECTRIC MOTOR DRIVEN**. We will, during the design of the shutter, advise and incorporate the best option for your application.

## LOCKING DEVICES

Barrel bolts, chain locks or pin locks can be incorporated into the shutter at point of manufacture. A combination of the locks may be used if ultra-high security is required.

We offer a service plan to ensure the smooth operation of your industrial roller shutter doors. Regular maintenance of the door forms part of the service plan. We undertake repairs to standard and automated industrial roller shutter doors.
